

NOVATO UNIFIED SCHOOL DISTRICT

16 BUILDINGS
500 DEVICES

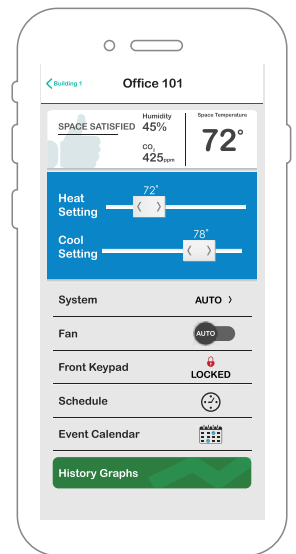

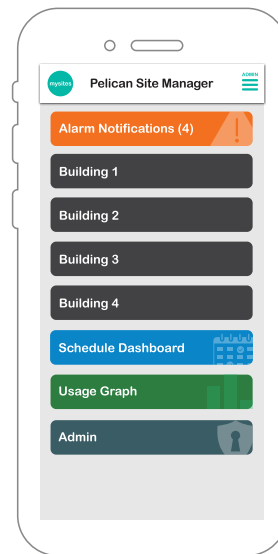

THE POWER OF REMOTE CONTROL

Novato Unified School District has installed 500 Pelican devices in 16 buildings since 2015, including two high schools, four middle schools, and ten elementary schools.

With mostly heat-only systems, especially in the elementary schools, the district was having problems controlling climate in its portables. It was looking for a wireless HVAC solution that could offer remote access to thermostats.

Compared to the old system, Pelican offered more versatility when it came to shut downs and scheduling. District representative Scott Himes said, "In the old system, when we shut down, I had to go to every single classroom, and that would take an entire weekend. Now I have the ability to control everything during break times, and the ability to make setting changes from winter to summer without having to go to every thermostat."

Pelican's lockout feature has also helped save the district energy. Himes said, "I can give people access to whatever I want and block them from whatever I want. Before, teachers had way too much access, were able to change the set points and the schedules. They would have the fan on all day and all night. Now, we can see what's being used and what's not."
