

BAKERSFIELD CITY SCHOOL DISTRICT

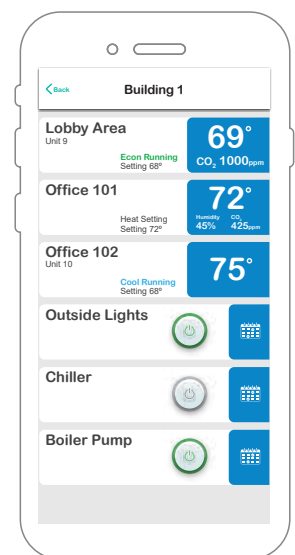

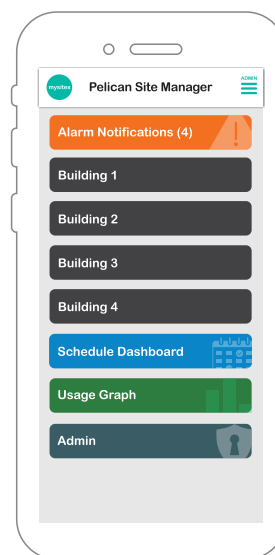

240 BUILDINGS
INSTALLED SINCE 2014

TRUE CONTROL

One of the largest school districts in California, Bakersfield City School District has installed Pelican in more than 240 buildings since 2014 and are currently planning on installing Pelican in an additional 120 buildings.

The district was frustrated by their traditional HVAC controls. They couldn't touch the controls, and if the system went down, had to wait up to three days for a service technician to come and fix it. Pelican immediately alleviated this issue. Israel Gutierrez of the district said, "Pelican eliminated depending on another contractor to come out here and tell us what we're supposed to do."

For the first time, the district was empowered to fully control their HVAC without requiring outside help. They find Pelican especially helpful in diagnosing problems. "There's no more guess work, because we're able to see the history graphs. We're able to see whether there's an actual heating or cooling problem. Before, we were on the go consistently, going from school site to school site. With Pelican, we get the alerts, we see the graphs, and we know something mechanical has failed on site. It's pretty straightforward."
