

# CENTER JOINT UNIFIED SCHOOL DISTRICT

2 BUILDINGS  
INSTALLED SINCE 2017

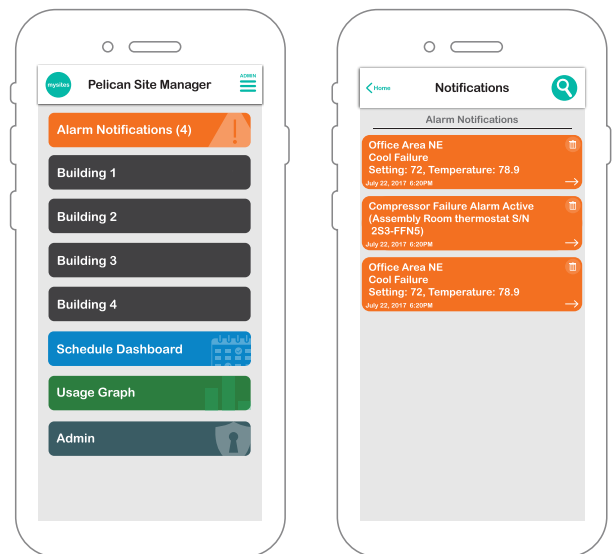

## CUTTING DOWN COMPLAINTS

Center Joint Unified School District has installed Pelican in two buildings since 2017.

The district wanted to find an HVAC solution that would reduce the number of complaint calls they were getting about their system, and thought a wireless solution would help reduce these calls.

They found that other wireless thermostats had problems communicating and frequently went down, and tried the Pelican system. Ever since, their current system is operating with fewer complaints. Craig Deason, Assistant Superintendent, Facilities and Operations, said, "I'm not having fires to put out. I'm not hearing much—it's been quiet."

The district plans to modernize other buildings in the future to replace old and worn out equipment, and it is looking to continue using Pelican as a solution. "I like that I get an energy management system at a fraction of the cost of traditional controls," said Deason. "I'm looking forward to getting rid of the other systems."
