

LINCOLN UNIFIED SCHOOL DISTRICT

13 BUILDINGS
650 DEVICES

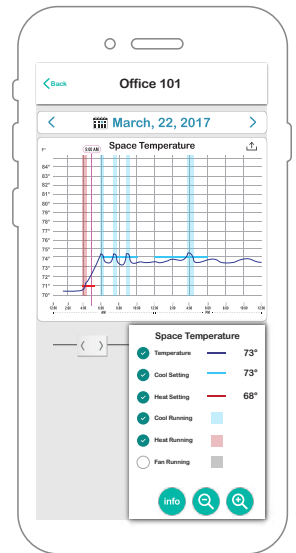

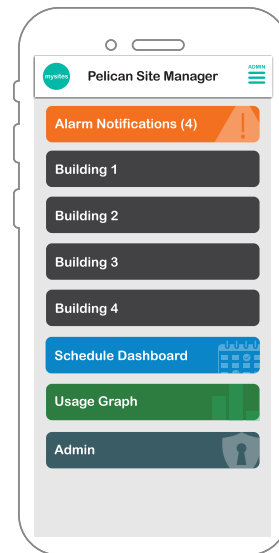

REMOTE DIAGNOSIS

Lincoln Unified School District has installed Pelican in 13 buildings since 2015, for a total of roughly 650 devices.

The district had been using a traditional controls system, but wanted more ability to monitor their HVAC. With 80% of their HVAC made up of package units, they found that Pelican provided an easy but powerful way to control their systems and give them this monitoring.

Seth Chhou, Maintenance HVAC Tech II, has noticed the system helps them troubleshoot problems faster. "Before, we got a teacher who says the heater's not working and we had to go to the classroom to check. Now I look at the history graphs first, and I can see when the problem started. The data gives me a good idea what the problem is before I go out there."
