### LAMPASAS INDEPENDENT SCHOOL DISTRICT TAKES BACK CONTROL OF ITS HVAC SYSTEMS BY SWITCHING TO WIRELESS

Lampasas Independent School District covers schools in the Lampasas, TX region. In December of 2017, the district decided to upgrade all of its HVAC controls systems and was looking for a solution that would enable it to take back control of its buildings.

Having worked with legacy controls systems in the past, Lampasas ISD was struggling with an older HVAC control system that was becoming costly to repair and maintain.

School district facilities manager Shawn Bender was looking for a solution that was affordable, easy to install and intuitive for new staff members to learn and use, without requiring extensive training or hiring of outside contractors.

With only a limited number of facilities staff, he also wanted something that would give him visibility over all the district's schools, and reduce the amount of time spent travelling between sites to troubleshoot issues.

Lampasas ISD began installing Pelican in its schools in late 2017, gradually replacing their old systems and adding new buildings on one at a time.

"Setup was easy, all it took was three wires. Since installing Pelican, we no longer get complaints from teachers and staff at all - it has been the easiest transition" says Bender.

With all five of its schools using Pelican, Lampasas ISD is looking forward to completing its Pelican rollout in 2019.
