18 CAMPUSES
THOUSANDS OF DEVICES

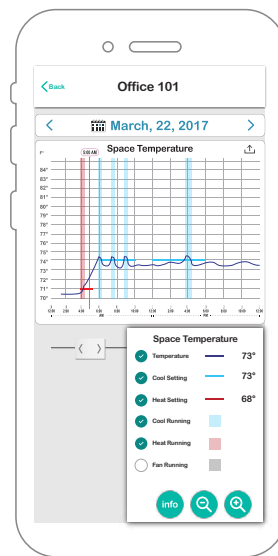

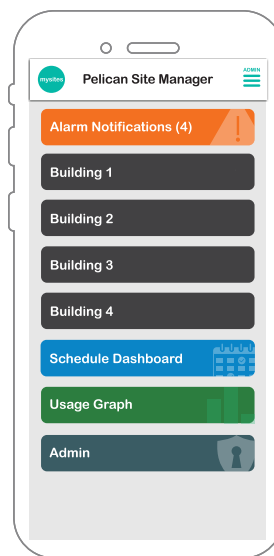

REMOTE DIAGNOSIS

Lincoln Unified School District has installed Pelican at 18 campuses since 2015.

The district was using a traditional controls system, but wanted more ability to monitor and manager their HVAC. They found that Pelican provided an easy but powerful way to control all of their systems and gave them better monitoring than the traditional solutions.

Seth Chhou, Maintenance HVAC Tech II, has noticed the system helps them troubleshoot problems faster. "Before, we got a teacher who says the heater's not working and we had to go to the classroom to check. Now I look at the history graphs first, and I can see when the problem started. The data gives me a good idea what the problem is before I go out there."
