

# SAN RAMON VALLEY UNIFIED SCHOOL DISTRICT

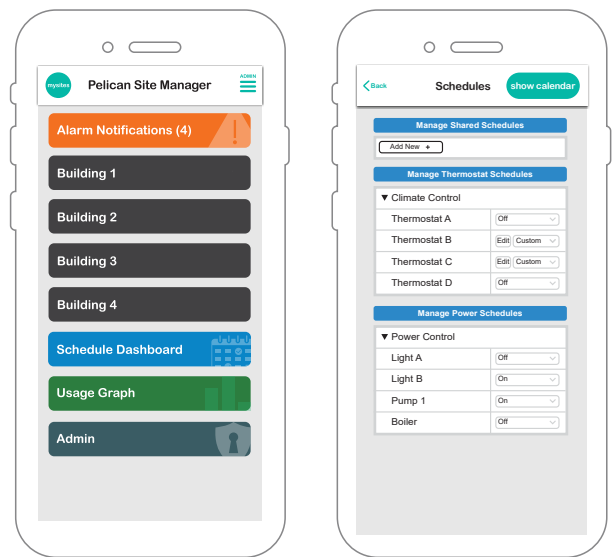

DISTRICT WIDE RETROFIT  
INSTALLED SINCE 2015

## SCHEDULING MADE SIMPLE

Disappointed with the limited features and failure rates of other wireless thermostats, the district was looking for a complete wireless HVAC solution. Pelican was easy to integrate into their existing systems and could be installed quickly without custom programming. "We can install the system in a day," said Tim Bonds, Energy Manager for the District.

Pelican's scheduling feature has been particularly useful. "Scheduling is awesome, because we can schedule individual classrooms. In vacation mode, we still have outside user groups come in and use the space. When the entire campus is on vacation, groups can override vacation mode," added Bonds, also noting that the lockout feature and Pelican's technical support have been valuable features.
